Duration	3 mins 16 secs
Grade	**14.00** out of 15.00 (**93.33**%)

Question **1**

Correct

Mark 1.00 out of 1.00

What is the key characteristic of binary search?

a. It works on unsorted lists
b. It compares elements sequentially
c. It always starts from the beginning of the list
d. It can be applied only if the list is sorted ✓

Question **2**

Correct

Mark 1.00 out of 1.00

_____ search takes a sorted/ordered list and divides it in the middle.

a. Linear
b. Both (1) & (3)
c. Hash
d. Binary ✓

Question **3**

Correct

Mark 1.00 out of 1.00

During a binary search, what happens if the target element matches the middle element?

a. The search ends successfully ✓
b. The search continues in the left sublist
c. The list is sorted
d. The search continues in the right sublist

Question **4**

Correct

Mark 1.00 out of 1.00

What is the first step in binary search?

- a. Compare the target element with the middle element in the list ✓
- b. Sort the list
- c. Compare the target element with the first element in the list
- d. Divide the list into two equal parts

Question **5**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 100; What are the mid values(corresponding array elements) generated in the first and second iterations?

- a. 90 and 99 ✓
- b. 90 and 100
- c. 89 and 94
- d. 94 and 99

Question **6**

Correct

Mark 1.00 out of 1.00

Which of the following scenarios is best suited for applying binary search?

- a. When the list contains duplicate elements
- b. When the list is very small
- c. When the list is unsorted
- d. When the list is sorted ✓

Question **7**

Correct

Mark 1.00 out of 1.00

Which of the following is a conventional searching technique?

- a. Hashing
- b. Dynamic search
- c. Linear search ✓
- d. Binary search

Question **8**

Correct

Mark 1.00 out of 1.00

Which method of searching involves sequentially comparing each element until a match is found?

a. Hashing
b. Linear search ✓
c. Binary search
d. Jump search

Question **9**

Correct

Mark 1.00 out of 1.00

Which of the following is not a limitation of binary search algorithm?

a. Must use a sorted array
b. Requirement of sorted array is expensive when a lot of insertion and deletions are needed
c. There must be a mechanism to access middle element directly
d. Binary search algorithm is not efficient when the data elements more than 1500 ✓

Question **10**

Correct

Mark 1.00 out of 1.00

In the context of searching, what is a successful search?

a. When the search algorithm finishes
b. When the list is sorted
c. When the element is found in the list ✓
d. When the list contains duplicate elements

Question **11**

Correct

Mark 1.00 out of 1.00

What happens when the element is found in linear search?

a. The search stops immediately ✓
b. The search starts over from the beginning
c. The search continues until the end of the list
d. The search backtracks to find duplicate elements

Question **12**

Correct

Mark 1.00 out of 1.00

In linear search, if the target element is not found in the list, what is the result?

a. The last element is returned
b. An error is raised
c. The search is considered unsuccessful ✓
d. The first element is returned

Question **13**

Correct

Mark 1.00 out of 1.00

In binary search, what happens if the middle element does not match the target element?

a. The search continues in the left or right sublist ✓
b. The list is sorted
c. The search stops
d. The search continues from the beginning

Question **14**

Incorrect

Mark 0.00 out of 1.00

What happens in a binary search if the list has an even number of elements?

a. The search stops
b. The higher middle element is chosen as the middle element
c. The middle element is chosen randomly
d. The lower middle element is chosen as the middle element ✗

Question **15**

Correct

Mark 1.00 out of 1.00

What is the advantage of binary search over linear search?

a. Binary search has a lower time complexity on large, sorted lists ✓
b. Binary search can find multiple instances of the target element
c. Binary search works on unsorted lists
d. Binary search does not require dividing the list
